

### **Intentional Radiator Test Report**

For the

**Link Labs** 

#### LL-RXR-27 Module

Tested under

The FCC Rules contained in Title 47 of the CFR, Part 15.247 for

Digitally Transmitting Sequence

**Prepared for:** 

Link Labs

130 Holiday Ct., Suite 100

Annapolis, MD 21401

### **Prepared By:**

**H.B.** Compliance Solutions

5005 S. Ash Avenue, Suite # A-10

Tempe, Arizona 85282

**Reviewed By:** 

Hoosamuddin Bandukwala

Cert # ATL-0062-E

Engineering Statement: The measurements shown in this report were made in accordance with the procedure indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurement made, the equipment tested is capable of operation in accordance with the requirements of Part 15 of the FCC Rules under normal use and maintenance.

## **EXECUTIVE SUMMARY**

## 1. Testing Summary

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 15.247. All tests were conducted using measurement procedure from ANSI C63.10-2013, FCC Public Notice 558074 DTS Guide June 09, 2015 as appropriate.

| Test Name               | Test              | Result | Comments |

## **EQUIPMENT CONFIGURATION**

#### 1. Overview

H.B Compliance Solutions was contracted by Link Labs to perform testing on the LL-RXR-27 Module under the quotation number Q150110036 Rev6.

This document describes the test setups, test methods, required test equipment, and the test limit criteria used to perform compliance testing of the Link Labs, LL-RXR-27 Module.

The tests were based on FCC Part 15 Rules. The tests described in this document were formal tests as described with the objective of the testing was to evaluate compliance of the Equipment Under Test (EUT) to the requirements of the aforementioned specifications. Link Labs should retain a copy of this document and it should be kept on file for at least five years after the manufacturing of the EUT has been permanently discontinued. The results obtained relate only to the item(s) tested.

| Product Name:             | LP Module   |
|---------------------------|---|

| <b>Environmental Test</b> | Temperature: 15-35°C                                  |
| Conditions:               | Humidity: 30-60%                                      |
|                           | Barometric Pressure: 860-1060 mbar                    |
| Modification to the EUT:  | None  |
| Evaluated By:             | Staff at Artesyn Embedded & H.B. Compliance Solutions |
| Test Date(s):             | 06/10/15 till 10/29/15                                |
|                           |   |

### 2. Test Facility

All testing was performed at Artesyn Embedded Technologies. This facility is located at 2900 S. Diablo Way, Suite 190, Tempe, AZ 85282. All equipment used in making physical determination is accurate and bears recent traceability to the National Institute of Standards and Technology.

Test facility at Artesyn Embedded Technologies is an A2LA accredited test site. The A2LA certificate number is 2716.01. The scope of accreditation covers the FCC Method - 47 CFR Part 15, ICES-003, CISPR 22, AS/NZS 3548 and VCCI

Radiated Emissions measurements were performed in a semi-anechoic chamber (equivalent to an Open Area Test Site). In accordance with §2.948(a)(3), a complete site description is contained at Emerson Network Power.

### 3. Description of Test Sample

The Link Labs, LL-RXR-27 modules are small electronic modules containing microcontroller, RF transceiver and supporting circuitry. It runs off battery powered. This model transmit data in a in the 902 to 927MHz range.

## 4. Equipment Configuration

| Ref. ID | Name / Description | Model Number | Serial Number |
|---------|--------------------|--------------|---------------|
| # 1     | Link Labs Module   | LL-RXR-27    | N/A           |

**Table 1. Equipment Configuration** 

### 5. Support Equipment

All support equipment supplied is listed in the following Support Equipment List.

| Ref ID | Name / Description | Manufacturer | Model # | Serial # |
|--------|--------------------|--------------|---------|----------|
| #2     | USB/AC Adaptor     | -            | -       | N/A      |

**Table 2. Support Equipment** 

### 6. Ports and Cabling Information

| Ref ID | Port name  | Cable       | Qty. | Length (m) | Shielded? | Termination      |
|--------|------------|-------------|------|------------|-----------|------------------|
|        | on the EUT | Description |      |            | (Y/N)     | Box ID & Port ID |
| #3     | Power      | USB         | 1    | 2          | N         | DC Power         |

**Table 3. Ports and Cabling Information** 

## 7. Method of Monitoring EUT Operation

A test receiver will be used to monitor the data transmission from the EUT.

### 8. Mode of Operation

The EUT will be configured to transmit at maximum power level. The modules were programmed with special test software that allowed to cycle through test modes. Test mode was provided to select the lower, middle and upper band of the. This software allowed the selection of the channel on the transmitter from three frequencies modulated and the other three in CW mode. These settings were created for testing purpose only.

#### 9. Modifications

9.1 Modifications to EUT

No modifications were made to the EUT

9.2 Modifications to Test Standard

No Modifications were made to the test standard.

### 10. Disposition of EUT

The test sample including all support equipment submitted to H.B Compliance Solutions for testing will be returned to Link Labs upon completion of testing & certification

### Criteria for Un-Intentional Radiators

#### 1. Radiated Emissions

| Test            | §15.109 | Test Engineer(s): | Frank Farrone |
|-----------------|---------|-------------------|---------------|
| Requirement(s): |         |                   |               |
| Test Results:   | Pass    | Test Date(s):     | 10/05/2015    |

#### Test Procedures:

The final radiated emissions test was performed using the parameters described above as worst case. That final test was conducted at a facility that meets the ANSI C63.4 NSA requirements. The frequency range noted in the data sheets was scanned/tested at that facility. Emissions were maximized as specified, by varying table azimuth, antenna height, and manipulating cables.

Using the mode of operation and configuration noted within this report, a final radiated emissions test was performed. The frequency range investigated (scanned), is also noted in this report. Radiated emissions measurements were made at the EUT azimuth and antenna height such that the maximum radiated emissions level will be detected. This requires the use of a turntable and an antenna positioner. The preferred method of a continuous azimuth search is utilized for frequency scans of the EUT field strength with both polarities of the measuring antenna. A calibrated, linearly polarized antenna was positioned at the specified distance from the periphery of the EUT.

Note: The specified distance is the horizontal separation between the closest periphery of the EUT and the center of the axis of the elements of the receiving antenna. However, if the receiving antenna is a log-periodic array, the specified distance shall be the distance between the closest periphery of the EUT and the front-to-back center of the array of elements.

Tests were made with the antenna positioned in both the horizontal and vertical polarization planes. The measurement was varied in height above the conducting ground plane to obtain the maximum signal strength. Though specified in the report, the measurement distance shall be 3 meters. At any measurement distance, the antenna height was varied from 1 meter to 4 meters. These height scans apply for both horizontal and vertical polarization, except that for vertical polarization the minimum height of the center of the antenna shall be increased so that the lowest point of the bottom of the antenna clears the ground surface by at least 25 cm.

| Frequency Range (MHz)  | Peak Data (kHz) | Quasi-Peak Data (kHz) | Average Data (kHz) |  |
|--|-----------------|-----------------------|--------------------|--|
| 30 MHz to 1 GHz  | 120 kHz         | 120 kHz               | N/A                |  |
| 1 GHz to 11 GHz  | 1MHz            | N/A                   | 1MHz               |  |
|  |                 |                       |                    |  |
|  |                 |                       |                    |  |
| Measurements were made using the bandwidths and detectors specified. The video filter was at least as wide as the IF |                 |                       |                    |  |

bandwidth of the measuring receiver.

Table 4. Radiated Emissions – Measurement Bandwidth

#### **Emissions Tests Calculations**

In the case of indoor measurements, radiated emissions measurements are made by the manipulation of correction factors using Rohde and Schwarz ES-K1 software. This is done automatically by the software during the final measurement process.

In both cases, the level of the Field Strength of the interfering signal is calculated by adding the Antenna Factor, Cable Factor and by subtracting the Amplifier Gain from the measured reading. The basic equation is as follows:

$$FS = RA + AF + (CF - AG)$$

Where: FS = Field Strength

RA = Receiver (indicated) Amplitude

AF = Antenna Factor

CF = Cable Attenuation Factor

AG = Amplifier Gain

This laboratory uses an approach of combining the CF and AG using an end-to-end measurement of the entire cabling system, including the test cable, any in-line amplifiers, attenuators, or transient protection networks, all measured in-situ.

For a sample calculation, assume a receiver reading of 52.5 dBuV is obtained. With an antenna factor of 7.4 and a combined cable factor (CF + AG) of -27.9:

$$FS = 52.5 + 7.4 + (-27.9) = 32 dBuV/m$$

FS = 32 dBuV/m

If desired, this can be converted into its corresponding level in uV/m:

$$FS = 10^{(32 \text{ dBuV/m})/20} = 39.8 \text{ uV/m}$$

Plot 1 - Radiated Emissions - 30MHz to 1GHz

Plot 2 – Radiated Emissions – 1GHz to 3GHz (For Industry Canada RSS-GEN)

### **Criteria for Intentional Radiators**

#### 2. Conducted Emissions

| Test Requirement(s): | §15.207 | Test Engineer(s): | Hoosam B.  |
|----------------------|---------|-------------------|------------|
| Test Results:        | Pass    | Test Date(s):     | 11/25/2015 |

#### **Test Procedures:**

The EUT was placed on a non-metallic table, 80cm above the ground plane inside a shielded enclosure. The EUT was powered through a  $50\Omega/50\mu$ H LISN. The conducted emissions tests were performed using the mode of operation and configuration noted within this report. The frequency range investigated (scanned), is also noted in this report. Conducted power line measurements are made, unless otherwise specified, over the frequency range from 150 kHz to 30 MHz to determine the line-to-ground radio-noise voltage that is conducted from the EUT power-input terminals that are directly (or indirectly via separate transformer or power supplies) connected to a public power network. Equipment is tested with power cords that are the same as those cords normally used or that have electrical or shielding characteristics that are the same as those cords normally used. Typically those measurements are made using a LISN (Line Impedance Stabilization Network). All 50 Ohm measuring ports of the LISN are terminated by 50 Ohms, either by the 50 Ohm EMI receiver or a 50 Ohm resistive load.

Refer to the Emissions Tests Calculations section in the Radiated Emissions section for sample calculations. For the purposes of the conducted emissions test, the Antenna Factor (AF) is replaced by the LISN correction factor.

| Frequency Range (MHz)  | Peak Data (kHz) | Quasi-Peak Data (kHz) | Average Data (kHz) |  |
|--|-----------------|-----------------------|--------------------|--|
| 0.150 - 30   | 9.0             | 9.0                   | 9.0                |  |
|  |                 |                       |                    |  |
| Measurements were made using the bandwidths and detectors specified. No video filter was used. |                 |                       |                    |  |

## 1. Occupied Bandwidth

| Test            | 15.247(a)(2), ANSI C63.10 | Test Engineer(s): | Keith T. |
|-----------------|---------------------------|-------------------|----------|
| Requirement(s): |                           |                   |          |
| Test Results:   | Pass                      | Test Date(s):     | 09/08/15 |

#### **Test Procedure:**

As required by 47 CFR 15.247(a): System using digital modulation techniques may operate in the 902-928MHz, 2400 – 2483.5MHz, and 5725 – 5850MHz bands. The minimum 6dB bandwidth shall be at least 500 kHz.

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer. The measured highest peak power was set relative to zero dB reference. The RBW of the Spectrum Analyzer was set to 100kHz and VBW>RBW. Measurements were carried out at the low, mid and high channels of the TX band at the output terminals of the EUT.

| Frequency (MHz) | Recorded    | Specification Limit |
|-----------------|-------------|---------------------|
|                 | Measurement |                     |
| 902.6           | 658.35 kHz  | ≥ 500 KHz           |
| 916             | 646.81 kHz  | ≥ 500 KHz           |
| 927.5           | 657.27 kHz  | ≥ 500 KHz           |

**Table 3. Occupied Bandwidth Summary, Test Results** 

| Frequency (MHz) | Recorded    | Comment  |
|-----------------|-------------|----------|
|                 | Measurement |          |
| 902.6           | 721.44 kHz  | DTS Mode |
| 916             | 693.84 kHz  | DTS Mode |
| 927.5           | 705.34 kHz  | DTS Mode |

## 2. RF Power Output

| Test Requirement(s): | §15.247(b)(3) | Test Engineer(s): | Keith T. |
|----------------------|---------------|-------------------|----------|
| Test Results:        | Pass          | Test Date(s):     | 09/01/15 |

**Test Procedures:** 

As required by 47 CFR 15.247(b)(3), RF Power output measurements were made at the RF output terminals of the EUT. DTS Procedure 9.1 was used for Peak measurements

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer capable of making power measurements. Measurements were made at the low, mid, and high channels of the entire frequency band.

| Frequency (MHz) | Conducted Power (dBm) | Conducted Power<br>(W) | Specification<br>Limit |
|-----------------|-----------------------|------------------------|------------------------|
| 902.2           | 25.16                 | 0.328                  | 1W                     |
| 916.0           | 25.01                 | 0.316                  | 1W                     |
| 927.8           | 24.87                 | 0.206                  | 1W                     |

## 3. Conducted Spurious Emissions

| Test            | §15.247(c) | Test Engineer(s): | Keith T. |
|-----------------|------------|-------------------|----------|
| Requirement(s): |            |                   |          |
| Test Results:   | Pass       | Test Date(s):     | 09/08/15 |

#### **Test Procedures:**

As required by 47 CFR 15.247(c): In any 100kHz bandwidth the frequency band in which the spread spectrum or digitally modulation intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either and RF conducted or a radiated measurement. Conducted spurious emissions at antenna terminal measurements were made at the RF output antenna terminal of the EUT.

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer with RBW set to 100KHz and VBW ≥ RBW. The Spectrum Analyzer was set to sweep from 30MHz up to 10<sup>th</sup> harmonic of the fundamental or 40GHz whichever is the lesser. Measurements were made at the low, mid and high frequency of the transmit band.

#### **Test Data:**

| Frequency (MHz) | Measured Level (dBm) | Limit (dBm) |

## 4. Radiated Spurious Emissions and Restricted Band

| Test            | §15.247(d), 15.209(a), | Test Engineer(s): | Keith T. |
|-----------------|------------------------|-------------------|----------|
| Requirement(s): | 15.205                 |                   |          |
| Test Results:   | Pass                   | Test Date(s):     | 02/24/15 |

#### **Test Procedures:**

As required by 47 CFR 15.247, Radiated spurious measurements were made in accordance with the procedures of the ANSI C63.10-2009.

The EUT was placed on a non-reflective table inside a 3 meter semianechoic room. The EUT was set on continuous transmit.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The frequency range up to the 10<sup>th</sup> harmonic was investigated.

To get a maximum emission level from the EUT, the EUT was rotated throughout the X-axis, Y-axis and Z-axis. Worst case is X-axis

| Detector<br>Setting | Resolution<br>Bandwidth | Video Bandwidth | Span         |
|---------------------|-------------------------|-----------------|--------------|

NOTE 2: Frequency marked with "\*" falls under the restricted band

## 6. Emissions At Band Edges

| Test            | §15.247(d) | Test Engineer(s): | Keith T. |
|-----------------|------------|-------------------|----------|
| Requirement(s): |            |                   |          |
| Test Results:   | Pass       | Test Date(s):     | 09/16/15 |

#### **Test Procedures:**

As required by 47 CFR 15.247, Band edge radiated emissions measurements were made at the RF antenna output terminals of the EUT using the marker-delta method.

The EUT was placed on a wooden table inside a 3 meter semi-anechoic chamber. The EUT was set on continuous transmit.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The EUT was set up at maximum power, first on the lowest operating channel, then on the highest operating channel of the transmit band.

| Frequency<br>(MHz) | Measured<br>Level | Detector | Limit  |
|--------------------|-------------------|----------|--------|
| 902                | -31.15dB          | Peak     | -20dBc |
| 928                | -22.65dB          | Peak     | -20dBc |

## 7. Power Spectral Density

| Test            | §15.247(d) | Test Engineer(s): | Hoosam B. |
|-----------------|------------|-------------------|-----------|
| Requirement(s): |            |                   |           |
| Test Results:   | Pass       | Test Date(s):     | 08/06/14  |

#### **Test Procedures:**

As required by 47 CFR 15.247(d), For digitally modulated systems, the peak power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3kHz band during any time interval of continuous transmission. Power spectral density measurements were made at the RF antenna output terminals of the EUT using the DTS methods section 10.3 was used for DTS mode.

The EUT output was connected directly to the spectrum analyzer through an attenuator. The measurements were made at the RF antenna output terminals of the EUT.

| <b>Detector Setting</b> | Resolution<br>Bandwidth | Sweep Time  | Span  |
|-------------------------|-------------------------|-------------|-------|
| Peak                    | 3KHz                    | 500 seconds | 2 MHz |

| Frequency (MHz) | Measured Level | Limit |  |
|-----------------|----------------|-------|--|
| 902.6           | 4.77 dBm       | 8 dBm |  |
| 916             | 4.59 dBm       | 8 dBm |  |
| 927.4           | 4.62 dBm       | 8 dBm |  |

Table 18 - PSD Summary Test Result-DTS Mode

Plot 20 - Power Spectral Density - Lowest Channel - DTS Mode

Plot 21 - Power Spectral Density - Middle Channel - DTS Mode

Plot 22 – Power Spectral Density – Highest Channel – DTS Mode

## I. Test Equipment

| Equipment         | Manufacturer       | Model     | Serial #     | Last Cal  | Cal Due   |
|-------------------|--------------------|-----------|--------------|-----------|-----------|
|                   |                    |           |              | Date      | Date      |
| Spectrum Analyzer | Agilent            | E4402B    | US41192757   | Jan/27/15 | Jan/27/16 |
| Temperature Meter | Control<br>Company | 6066N53   | 140536623    | Aug/08/14 | Aug/08/16 |
| Spectrum Analyzer | Hewlett<br>Packard | 8563E     | 3821A09316   | Oct/03/15 | Oct/03/16 |
| Spectrum Analyzer | Hewlett<br>Packard | 8563E     | 3821A09316   | Sep/19/14 | Sep/19/15 |
| High Pass Filter  | Mini-Circuits      | VHF-3100+ | 1023         | NCR       | None      |
| EMI Receiver      | R&S                | ESCS-30   | 828985/007   | Dec/02/14 | Dec/02/15 |
| High Pass Filter  | Mini-Circuits      | VHF-1320+ | 1034         | NCR       | None      |
| Signal Generator  | R&S                | SMY02     | 1062.5502.12 | NCR       | None      |
| Attenuator 10dB   | Huber+Suhner       | 6810.17.A | 747300       | NCR       | None      |
| Horn Antenna      | Com-Power          | AHA-118   | 711150       | Feb/10/15 | Feb/10/16 |
| Bilog Antena      | Chase              | CBL6140   | 1040         | Nov/09/14 | Nov/09/15 |

Table 19 – Test Equipment List

## **END OF TEST REPORT**

<sup>\*</sup>Statement of Traceability: Test equipment is maintained and calibrated on a regular basis. All calibrations have been performed by a 17025 accredited test facility, traceable to National Institute of Standards and Technology (NIST)
